Funny story, I was musing about a Civilization sequel just yesterday while out for a run, and lo and behold, 2K Games says it's in development as I'm typing this. What's more-and I have to admit, somewhat unexpectedly-it's still being developed for PC. What's Civilization? Surely you jest...but in case you're serious, it's pretty simple: One of the most important turn-based strategy video game in the history of the medium. Also: A pretty spot-on history's broad strokes and ideological angles, anyway). The general goal-to conquer the world by diplomatic or less-than-diplomatic means-hasn't changed much since the original debuted in 1991, but as they say, the journey is all, and that journey's generally improved by leaps and bounds with each installment. Calling Civilization V's new engine "astonishing," 2K says the game has been rebuilt "from the ground-up" with a brand new combat engine, more sophisticated diplomacy, and expansions all around to existing features. The most startling change? Have a seat, Civ wonks: Hexagon tiles. That's right, six sides per board position instead of four. UPDATE: And that's how long it's been since I've played a Civ game. As one of my readers astutely reminds, you could still move or attack in diagonal directions, meaning a move to hexes actually drops the number of possible attack/defend angles from eight to six, and instead streamlines movement and makes visualizing it simpler, since the center of one hex is equidistant from the center of any adjacent other. Yes, hex-based approach fit like a glove, it's probably a guy like Sid Meier, the series founder and Civilization V's design lead. More from the press release: Civilization V takes this definitive strategy, more realistic gameplay and stunning organic landscapes for players to explore as they expand their empire. The brand new engine orchestrates a spectacular visual experience that brings players closer to the Civ experience than ever, featuring fully animated leaders interacting with players from a screen-filling diplomatic scene and speaking in their native language for the first time. Wars between empires feel massive as armies dominate the landscape, and combat is more exciting and intense than ever before. The addition of ranged bombardment allows players to fire weapons from behind the front lines, challenging players to develop clever new strategies to guarantee victory on the battlefield. In addition to the new gameplay features debuting in Civilization V, an extensive suite of community, modding and multiplayer elements will also make an appearance. "Sid Meier's Civilization franchise has been recognized as one of the greatest PC game franchises of all time with millions of units sold worldwide," said Christoph Hartmann, president of 2K. "Civilization V takes the franchise further by offering players a more immersive experience with deeper strategies; heightened tactical combat; vast, realistic landscapes to explore, battle over and claim as their own; and an in-game community hub where Civ fans can share content and compete against each other without leaving the game. This marks a new era that will forever change the franchise responsible for sleep deprivation and reduced productivity for nearly two decades." "Each new version of Civilization presents exciting challenges for our team," said Sid Meier, director of creative development at Firaxis Games. "Thankfully, ideas on how to bring new and fun experiences to Civ players never seem to stop flowing. From fully animated leaders and realistic landscapes, new combat tactics, expanded diplomacy and shared mods, we're excited for players to see the new vision our team at Firaxis has brought to the series." It's already February, so we'll see it, what, sometime in late 2011? Early 2012? Or not. How does 'fall 2010' strike you? More at the game's just-launched official site. The listing appeared on Amazon's French and German sites, the former of which has now been pulled. The German listing is still live here (opens in new tab) and has Windows 7 and Vista listed as compatible platforms. But it's not just Amazon dropping clues. A leaked bug log for the game makes over 170 references to a PC version existing as far back as June 2012.PC Gamer pointed out that the log contains "PC development bugs, numerous notes on DX11 support and a related 'smog' weather setting." The leak actually appeared in an XML file back in September 23, and has been passed around GTA fans since. The update, which is due to drop tomorrow, February 12, will add Nvidia DLSS support. DLSS stands for Deep Learning Supersampling, and is one of Nvidia's flagship features for its latest RTX 2000-series graphics cards, such as the RTX 2080 Ti.It's quite complicated tech. but it has the potential to bring even greater graphical fidelity to PC games - including Battlefield V. It uses super-sampling to render images, without being as resource-intensive as traditional anti-aliasing. For a more in-depth explanation of DLSS, check out Nvidia's blog post on the tech behind its Turing graphics cards. (opens in new tab) The patch will also bring performance improvements for DXR ray tracing, which again should make the game run and look better on PC with compatible hardware. As the full patch notes (opens in new tab) explain, "This update includes further optimizations to DXR ray tracing performance and introduces NVIDIA DLSS to Battlefield V, which uses deep learning to improve game performance while maintaining visual quality." Four player co-opWhile those two features are only for PC gamers (with compatible hardware), PC and console players will also get a four-player co-op mode that allows them to team up with three other friends. Fan-favorite mode Rush from previous Battlefields will also be coming soon. 40 best PC games 2019: the must-play titles you don't want to miss Following a recent update to the game, GTA Online players are reporting a sharp rise in the number of bans being enforced by Rockstar. The problem appears to only be affecting players in the PC community, with a growing thread of Reddit users (opens in new tab) reporting that they've been banned following the Southern San Andreas Super Sports Series update. The key thing about these complaints is that the players are saying they've been banned unfairly and given the recent spike in negative Steam reviews (opens in new tab) for the game, their ire is clear. The bans last 30 days with no appeals system and players who have just started the game as well as those wh games to protest they've been unfairly punished but the sheer number of players claiming the same period of time does suggest something has indeed gone wrong. The popular opinion seems to be that a change to the game's tunables in the most recent update has triggered the anti-cheating system and people are being flagged up as using mods when they're not. Everything we know about and want to see in GTA 6 (Image credit: Rockstar Games) Rockstar's wildly popular Grand Theft Auto 5 is the latest free game on the Epic Games Store, and after a rocky launch that took the marketplace down, you can finally grab the title at no cost. The initial announcement came from a now-deleted Epic Games Store tweet, which claimed that Rockstar's popular open-world crime game will be free to download on PC until May 21. The game's initial arrival led to the Epic Games Store crashing for several hours, but it seems to be holding steady as of May 15. Epic Games is offering the "Premium Edition" of Grand Theft Auto 5, which gets you the base game and the GTA Online multiplayer component, as well as a Criminal Enterprise Starter Pack that gets you \$1 million in in-game cash for kickstarting your online adventures. How to get GTA 5 on PC for free you'll need to download the Epic Games Store launcher and create an Epic Games account, which you can do at the official Epic Games website (opens in new tab). From there, simply scroll down to the 'Free Games' section of the store and select Grand Theft Auto 5. Note that you'll need two-factor authentication enabled to get your free game, which you can set up right here (opens in new tab). in new tab). Once that's set up, you'll have until May 21 at 11am ET to claim GTA 5 for free. According to GTA 5's system requirements, you'll need at least an Intel Core 2 Quad CPU Q6600, 4GB of RAM, an Nvidia 9800GT/AMD 4870 or better and 72GB of storage to run the game. But the recommended spec starts at a Core i5 CPU, a GTX 660 or better and 8GB of RAM. It's unclear if GTA 5 on the Epic Games Store has been doling out free games every month since late 2018, with previous notable giveaways including The Witness, Overcooked, the Batman Arkham Collection and Rayman Legends. But GTA 5 is by far the biggest freebie the service has secured yet, and could be the perfect antidote to your lockdown boredom.
